

Mockito Exercises

Exercise 1: Mocking & Stubbing

CalculatorApi.java (External API)

```
public interface CalculatorApi {  
    String getMessage();  
}
```

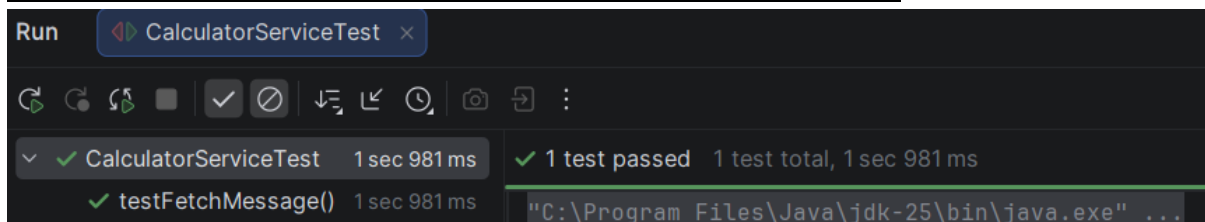

CalculatorService.java (Service Class)

```
public class CalculatorService {  
    private CalculatorApi api;  
    public CalculatorService(CalculatorApi api) {  
        this.api = api;  
    }  
    public String fetchMessage() {  
        return api.getMessage();  
    }  
}
```

CalculatorServiceTest.java (Mocking and Stubbing Test)

```
import org.junit.jupiter.api.Test;  
import static org.junit.jupiter.api.Assertions.assertEquals;  
import static org.mockito.Mockito.*;  
public class CalculatorServiceTest {  
    @Test  
    public void testFetchMessage() {  
        CalculatorApi api = mock(CalculatorApi.class);  
        when(api.getMessage()).thenReturn("Mockito Working");  
        CalculatorService service = new CalculatorService(api);  
        String result = service.fetchMessage();  
        assertEquals("Mockito Working", result);  
    }  
}
```

Output (Exercise 1 – Mocking and Stubbing Result)

Mockito Exercises

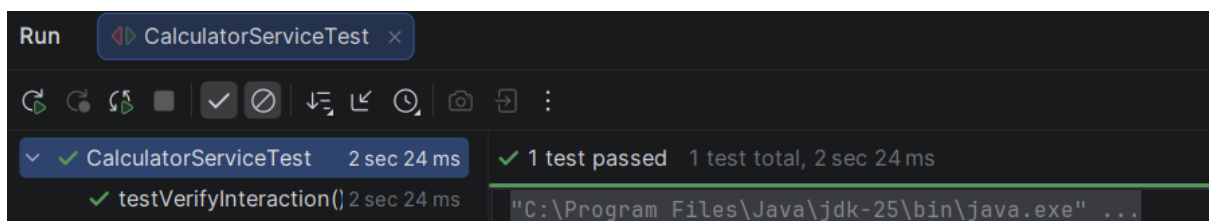

Exercise 2: Verifying Interactions

*External API and Service class same as Exercise 1

CalculatorServiceTest.java (Verifying Interactions Test Class)

```
import org.junit.jupiter.api.Test;
import static org.mockito.Mockito.*;
public class CalculatorServiceTest {
    @Test
    public void testVerifyInteraction() {
        CalculatorApi api = mock(CalculatorApi.class);
        CalculatorService service = new CalculatorService(api);
        service.fetchMessage();
        verify(api).getMessage();
    }
}
```

Output Screenshot (Exercise 2 – Verifying Interactions Result):

Pom.xml (Project Dependencies- for both Ex1 and Ex2):

```
<dependency>
    <groupId>org.mockito</groupId>
    <artifactId>mockito-core</artifactId>
    <version>5.12.0</version>
    <scope>test</scope>
</dependency>
```
